

## ENVIRONMENTAL POLICY

**TARO PLAST** and all the companies that are part of the group are aware of the importance of the environmental protection and maintain an active Environmental Management System compliant with the ISO 14001:2015 standard.

Therefore, the commitment to prevent pollution, to guarantee and pursue the continuous improvement of its environmental performance by minimizing the risks related to the activities carried out and the products/services provided continues.

In accordance with these commitments, the TARO PLAST group aims to achieve the following objectives:

- Ensure compliance with applicable laws and regulations and any voluntary agreements, regarding its significant environmental impacts;
- Assess risks and opportunities for the organization and the environment;
- Eliminate risks to people's safety and environmental protection, in relation to the knowledge acquired based on technical progress and, where this is not possible, reduce them to a minimum by acting on the causes that generated them;
- Adopt a plan for the prevention and management of environmental emergencies;
- Carry out continuous control of the production process and monitor the related environmental aspects/impacts;
- Raise awareness among suppliers of goods and services regarding the contents of the Environmental Policy;
- Rationalize the use of natural and energy resources;
- Commit to waste management in order to favor, where possible, recovery and recycling rather than disposal;
- Pursue continuous improvement of environmental performance and stakeholder satisfaction.

In this regard, TARO PLAST is aware that plastics play a fundamental role in providing and guaranteeing the quality, comfort and safety of modern lifestyles. Their extraordinary cost/performance ratio is particularly advantageous for satisfying the needs of the entire society, not only in this historical moment but also for future generations who have the right to benefit from products that will bring benefits to their daily lives. The ability to respond to the needs of the future is the basis of the concept of "Sustainable Development". Plastic products are already improving people's lives every day, while conserving natural resources and helping protect the environment for tomorrow.

The technopolymers and thermoplastic elastomers produced by TARO PLAST belong to the large family of plastics. These materials contribute to sustainable development as, subjected to repeated heating and cooling cycles, they can be reworked and recycled.

TARO PLAST is committed to providing the necessary technical, economic and professional resources so that the objectives of the Environmental Policy are fully achieved.

This Environmental Policy is shared at all levels and it is everyone's responsibility to actively collaborate in its improvement, within their sphere of competence.

TARO PLAST guarantees, through subsequent verification activities, that this policy is understood and implemented and that the declared objectives are pursued.
